Statistical Engineering. Thoughts on the current situation and proposals for the future

Tuesday, 18 May 2021 11:35 (20 minutes)

Five months ago, ISEA (International Statistical Engineering Association) organized a webminar with the title: "What It Is, What It Is Not, and How it Relates to Other Disciplines". I was invited to participate as a discussant, which forced me to think about the topic. The two excellent presentations and the ensuing discussion gave me new points of view. In this presentation, I summarize my thinking. First on the current situation, a quick review of the many accomplishments so far and the weak points, and then I propose a way forward that includes some rather radical innovations.
